

# HORSE BUTTE RANCH

## 13th Annual Forage Developed Bull Sale

A Herd Bred For Excellent Maternal Qualities And Forage Efficiency

*Saturday, November 10, 2007*

Certified Angus Beef® Lunch starting at 11:30 a.m.

**SALE AT 1:00 P.M.**

*Galen Voss, Auctioneer*

308-432-3275 (home) • 308-360-1419 (cell)

**SALE LOCATION:** At the ranch, 2.5 miles south of Two Dot, MT

**ACCOMMODATIONS:** Corral Motel, Harlowton, MT, (800)392-4723, Countryside Inn, Harlowton, MT, (800)632-4120, Crazy Mountain Inn, Martinsdale, MT, (406)572-3307

**TERMS & CONDITIONS:** The cattle will sell under the standard terms and conditions as recommended by the American Angus Association.

**HERD HEALTH:** Katie Rein Peters, DVM, Harlowton, MT takes care of our herd health. All animals have been vaccinated for 8-way, IBR, PI3, BVD, BRSV, and Pasturella pneumonia. The bulls were poured with Ivermectin in late September. All bulls have tested negative for persistent BVD. *Many thanks to Dean Holmes, DVM, a great vet, a great human and a great friend who took care of our animals for many years prior to his recent retirement.*

**FERTILITY:** All bulls were fertility tested by Katie Rein Peters, DVM in late September.

**ULTRASOUND CARCASS DATA:** Sonja Gregory, Ultratek, ultrasounded all the bulls. The resulting ratios for marbling (%IMF), ribeye area (REA) and rib fat are included in the catalog. The EPD's listed are ultrasound body composition EPD's

**DELIVERY:** Free delivery of bulls in the continental U.S. to the nearest central location (you may have to drive to a local sale barn to pick up your bulls). Delivery will occur as soon as possible after the sale as arrangements can be made. *Bring your own trailer, haul your own bulls and we will deduct \$75 per bull.*

**LIABILITY:** Everyone attending this sale does so at their own responsibility and risk and without liability on the part of the owners or their employees.

**INSPECTION OF BULLS:** The bulls are available for your inspection here at the ranch.

**RETAINED INTEREST:** We will be retaining an interest on select bulls. These will be posted the morning of the sale and announced from the block.

Dear Cattle Ranchers,

We welcome you to the 13th Annual Bull Production Sale! The Horse Butte program extends a very special appreciation for the repeat buyers who forge along with us. We are very fortunate to have strong support from producers who have purchased bulls from us from the very beginning of this program, going way back to private treaty sales in the early 1990's. For those of you who are new to our program, we extend a hearty welcome. For those of you who have studied it and haven't made it to a sale yet, we invite you to inspect the bulls on their merits.

For all intents and purposes, the Angus breed was established on the maternal merits of the Angus cow. Flavorful, well marbled beef resulted and everyone seemed content with the ability of Angus cattle to produce a balanced package of traits. These traits held the maternal foundation together. Where are we now in the greater "loop" of the Angus breed? Creation of numerical indicators for expected progeny differences, while important and informative, has made breeding cattle into a competitive sport instead of an art. When we say we are "out of the loop", this is what we mean. The social aspects of genetic dialogue can be rewarding in terms of human exchange, but breeding cattle like everyone else, using the same sires popular throughout the breed, does not advance our genetic ideals. Understand that this is not a judgment about the quality and value of mainstream Angus genetics. It is, however, a stand based on breeding cattle which attempts to fit genetics with environment and management practices founded on making a profit from grass. This challenge is what we are working hard to produce. If your operation is compatible with this notion, the bulls in this offering have something of value.

The philosophy is simple. The more you put into your cattle financially (labor, feed etc.), the more you must get out of them. First of all, we know what kind of cattle work well in this environment and we cull and select accordingly. We remain loyal to hard working, feminine cows who take care of their calves, breed back on time and have excellent udders. We select against cows that take the easy fleshing trait too far and create the illusion of grass use efficiency by padding their own bodies and slighting their calves. We select against extended growth, cows that never stop growing. And of course fertility. It's the number one thing to select for.

We calve both cows and heifers on grass in May and June in large expanses of landscape which provide ample, if not exceptional, space for cows to perform the task of birthing and caring for their calves as nature intended. This process identifies cows with exceptional maternal value. It sorts the rest off. At this time of the year baby calves get their full dose of sleep, nutrition and sunlight. This eliminates sickness in its infinite varieties and produces a strong animal, which will show in its ability to perform all the way through the fed end product. A lot of the Certified Angus Beef® qualified product is the result of a healthy animal, fed right and harvested on time. Horse Butte

cattle produce Certified Angus Beef® premiums as well as cater to forage oriented marketing programs. They feed out fast and efficiently with exceptional appetite and conversion. Above all, they produce outstanding replacement females that create optimal performance from your grass system.

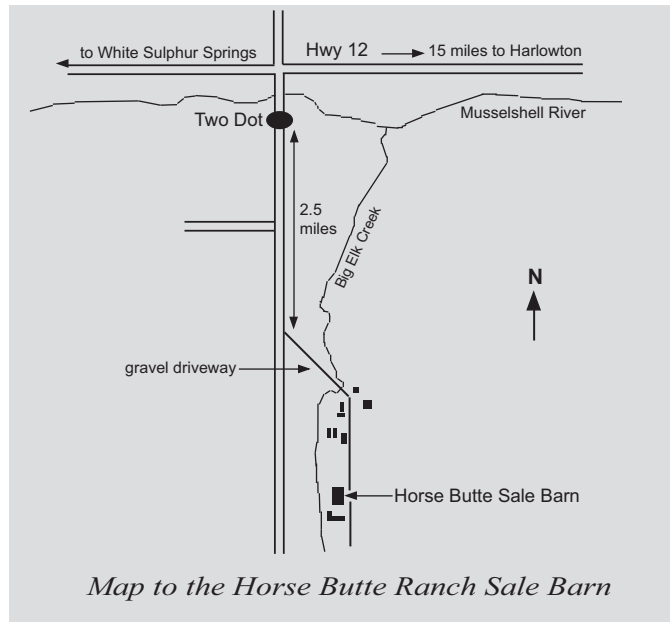

The sires and genetic influences we are utilizing have proven themselves as valuable contributors to our goals. We continue to select and reward older, proven cows for use in our embryo transplant program. Through this we are able to select new herdsires which carry our goals forward.

Candidates for the bull sale are selected based on their conformation, foot and leg structure, health and performance off the cow at weaning, not knowing which sires they are out of since we use multiple bulls in all the breeding pastures. Through DNA testing we are able to identify about 95%.

We do not clip our bulls. Beauty is in the eye of the beholder. We want you to look at the bull in his entirety. After all, his masculinity is one of the main things you are purchasing. Also, by having a full coat of hair, the animal goes into the winter months in good shape. The bulls are grown out primarily on forage with a growing supplement added a couple of months before the sale. Please note that the bulls sell in catalog order, front to back, oldest to youngest. The auction itself is conducted in a fair and methodical manner with you, the commercial producer, in mind.

Please make it here for lunch starting at 11:30 am. If you get here the day before, come out look at the bulls and join us for steaks and refreshments Friday evening at the ranch sale barn. If you have any questions, please call or e-mail and let us try to help. Thank you for your interest.

Dennis & Erica Voss

• “Encore” is the sire, grandsire and great-grandsire of a large number of bulls in this offering. He adds longevity; he bred his last cows as a 12 yr. old, his dam produced her last calf at 17 yrs of age. His structure was impeccable. He had a gentle disposition. He improves teat and udder attachment and produces excellent marbling and ribeye. His progeny excel on forage, shed off well and he has proven to be a bull that works well on all types of forage from the southern fescues to the northern hard grasses. Owned by Keeney Angus and Shoshone Angus.

• “1116” is fulfilling his role as senior contributor to the maternal influence of Shoshone Encore. He also brings in the direct influence of the “3116” cow who, now deceased, was one of the finest examples of maternal finesse to grace our pastures. “1116” sons should be used to bring maternal value into your program. He has excellent foot, leg and hock structure, has never been doctored for anything, is exceptionally intelligent and a prolific breeder. Bred and owned by Horse Butte Ranch.

• “221” is the highest growth sire among his full brothers. He has strong carcass quality and produces exceptional ribeye while maintaining a sought after, negative rating in backfat. We have retained a number of his daughters in the herd. They are proving themselves to be efficient, well uddered, range cows. We value his service immensely. He maintains himself well, breeds efficiently and aggressively. Owned and bred by Horse Butte Ranch.

• “32” is a younger brother who shows the most body mass and capacity. His career began primarily with commercial cows and he has now started to be used with more of the registered cows. He has earned his place here the hard way and as time goes on, more data will evolve to support his credentials. A number of unregistered bulls are in this year’s sale out of “32” or his brother “220”, who seem to match up too closely on DNA markers. He could easily end up being the best one of the “full brothers”. Time will tell. Owned and bred by Horse Butte Ranch.

• “30” puts it all together. The most eye appealing of the “full brothers” he stamps his calves with the same phenotype that he carries himself. Because he has made a career of fighting his way to dominance, he’s also had to suffer the consequences. After a severe anerobic infection in the front leg, we hope to get semen collected this fall. “30” is a very complete animal. Excellent feet, excellent hock and stifle, tremendous length of body and muscle. If we can’t get semen collected on this bull, these could be his very last progeny to sell. Owned and bred by Horse Butte Ranch.

• “917” probably doesn’t get the credit he deserves. Performing a full season of breeding this year as well as 6 years previous, he has never had to be doctored, never caused trouble and always produces a predictable, balanced kind of progeny. His full sisters are some of our best cows. He excels in quiet disposition, super good structure and high maternal qualities. As an 8 year old bull he travels with the spirit of youth and the intelligence and breeding ability of a wise old herd bull. Owned and bred by Horse Butte Ranch.

• “2843” was selected as an outcross sire from our 2002 crop. He was muscular, sure footed, good dispositioned and has the old Rollin Rock foundation. He produces stretchy, growthy cattle with excellent tops and good feet and legs. Deceased. Owned and bred by Horse Butte Ranch.

• “0733” was originally purchased by Rich and Laurie Swartz of Broadview and purchased back by Horse Butte when they dispersed their cows. He was a massive, muscular animal, very dominant and moved like a cat. His maternal fundamentals were excellent, as his dam and grand-dam were both excellent uddered, high performing cows. This year’s sons will be some of the last of his offering as age and dominance finally caught up to him. Deceased. Owned and bred by Horse Butte Ranch.

• We purchased “974” for \$33,000 from the famous Gartner-Denowh program in 2000. He produced excellent muscle over the top and quarter and has one of the high ribeye EPD’s in the breed. His daughters are excellent, deep made with impeccable udders and small teats. These will be the last “974” calves in the offering as age finally caught up to him. Top commercial operations are using semen from “974” to produce excellent steers and top quality replacement heifers. Bred by Gartner-Denowh Angus, owned by Horse Butte Ranch.

• “Beetseed” was named as a joke for the benefit of Larry Leonhardt, Shoshone Angus. I don’t know if Larry ever cracked a smile about it, but I still chuckle. “Beetseed” was the highest ratioing marbling bull we have ever tested. Although he was injured, we did collect some semen and will most certainly use it in our embryo transplant program. “Beetseed” was an aggressive breeding animal, with character abundant. Always talking the talk. What I would call a bugler, a herder and a typical, pure Shoshone bred animal. He had excellent structure and low birthweight. Deceased. Owned and bred by Horse Butte Ranch.

### *The Guarantee*

It is our hope that you will select bulls with confidence because we believe that they will outbreed and outlast most Angus bulls that go through rigorous feedlot pressures brought on by too much hot feed, too much doctoring and sickness, and too much confinement. We expect you to take these bulls home, feed them like you do your other young herd bulls and give them shelter to keep the testicles from frostbite. We stand behind them for the first breeding season, fully guaranteed. If your bull develops a problem, let us know and take him to the vet for a diagnosis. We do require a vet's opinion. Many times a bull scratches his penis, it gets infected and all he needs is 2 weeks of treatment early in the development of the injury. Of course if a bull ruptures his penis he is done for good. All of these bulls are tested and ready to roll. If something happens over the winter, except for frostbite, and you retest before turnout and find the bull deficient, notify us immediately. We'll either replace the bull with another or credit will be given in the next sale.

### **COW ENERGY VALUE or (\$EN)**

#### **A new measurement tool from the American Angus Association**

**Cow Energy Value**, listed as (\$EN), was introduced in the spring of 2005 by the American Angus Association. It is a measurement of cow efficiency. It measures, in dollars per cow per year, the difference in cow energy requirements as an expected dollar savings difference in future daughters of sires. **A larger value is more favorable when comparing two animals.** The bulls listed in this catalog have an average of 14.06(\$EN), and the industry's average on bulls is 6.58(\$EN).

The American Angus Association has been in the lead in developing EPD's and the means of measuring production of many kinds. However cattle with the most production often require the most inputs. This is a measurement and value that attempts to put a measure to the potential profitability of the cowherd, not just its production output. Stand by, we will be watching this one.

This bull is out of one of the best Shoshone Ester's ever. We tried to get a flush out of her before we lost her as an old cow but weren't able to do it. This calf was raised with the butcher steer most of his early life. He's a quiet bull with a really great set of maternal ancestors.

 Either way you can't miss here on the sire to this bull, both are full brothers. This bull's a real character, always has his hands on his hips checking things out, but good dispositioned. Use on cows.

 This bull lost his dam shortly after weaning. She was a great old cow, very attentive to her calf. This bull has an excellent disposition, could actually be made into a "pasture scratcher".
